

Comprehensive tire pressure management from Bosch with the new QUICK FIT+ sensors and the Tire Pressure Analyzer 400

October 2025

PI 11998 MA

Fast programming, high coverage, flexible valve design

- ▶ Major time savings thanks to fast programming of up to six sensors simultaneously
- ▶ QUICK FIT+ sensors cover over 90 percent of vehicles
- ▶ Tire Pressure Analyzer 400: always up to date thanks to online updates

Karlsruhe and Plochingen, Germany – With the Bosch QUICK FIT+ sensors and the new Tire Pressure Analyzer 400 programming tool, Bosch presents the latest generation of its tire pressure monitoring system (TPMS). Both products help workshops to make their workflows for tire pressure monitoring services much more efficient.

The new portfolio also includes three sensors whose valve can be flexibly adapted to different rims. This portfolio expansion to a total of six part numbers enables workshops to use the sensors for a greater number of rim types. The QUICK FIT+ sensors are available in both rubber and aluminum versions in black, silver, and titanium and cover over 90 percent of today's European vehicles.

Bosch QUICK FIT+ sensors: faster, more flexible, and more durable

Workshops also benefit from a significant saving on programming time of up to five seconds per sensor, and they have the option of programming up to six sensors simultaneously. One further advantage is that the new sensors' battery capacity has been increased by 50 percent compared to the previous model. This ensures long-lasting performance with an expected service life of up to ten years. The QUICK FIT+ sensors are produced to original equipment standards at the Bosch plant in Spain.

Tire Pressure Analyzer 400: enhanced functions for maximum efficiency

With over 95 percent of vehicles covered and the ability to program over 20 different universal sensor brands, the Tire Pressure Analyzer 400 is an essential tool for any modern workshop. The Tire Pressure Analyzer 400 supports a wide range of universal sensors available on the market, including the new Bosch QUICK FIT+ sensors as well as Bluetooth sensors from other manufacturers.

Wireless data transmission enables the TPMS data to be displayed and checked directly on the 2.8-inch color display. Regular software updates keep the device's range of functions up to date and ensure that workshops always have access to the latest vehicle and sensor coverage.

An OBD-II module is already included in the device to support learning processes for e.g. Asian vehicle manufacturers such as Toyota, Hyundai, and Nissan. Alternatively, Bosch's ESI[tronic] software can be used to ensure seamless integration of these vehicles.

In short: the complete package for workshops

With the QUICK FIT+ sensors, the Tire Pressure Analyzer 400, and technical support, Bosch offers a comprehensive package that makes it easier for workshops to diagnose, remove, install, and program TPMS sensors. The support team can be reached at TPA.support@de.bosch.com for any technical questions.

The Bosch QUICK FIT+ sensors and the Tire Pressure Analyzer 400 are now available for purchase.

The Mobility Aftermarket division (MA) provides the aftermarket and repair shops worldwide with modern diagnostic and repair shop equipment and a wide range of spare parts – from new and exchange parts to repair solutions – for passenger cars and commercial vehicles. Its product portfolio includes products made as Bosch original equipment, products developed in-house and specifically manufactured for the aftermarket, as well as services. About 16,000 associates, as well as a global logistics network, ensure that spare parts reach customers quickly and on time. MA supplies testing and repair-shop technology, diagnostic software, service training, and information services. In addition, the division is responsible for the "Bosch Service" repair-shop franchise, one of the world's largest independent chains of repair-shops, with some 13,000 workshops, and more than 1,000 "AutoCrew" partners in over 100 countries. In addition, with Bosch Classic, MA supports owners of classic cars with a wide range of spare parts and services.

The Bosch Group is a leading global supplier of technology and services. It employs roughly 418,000 associates worldwide (as of December 31, 2024). The company generated sales of 90.3 billion euros in 2024. Its operations are divided into four business sectors: Mobility, Industrial Technology, Consumer Goods, and Energy and Building Technology. With its business activities, the company aims to use

technology to help shape universal trends such as automation, electrification, digitalization, connectivity, and an orientation to sustainability. In this context, Bosch's broad diversification across regions and industries strengthens its innovativeness and robustness. Bosch uses its proven expertise in sensor technology, software, and services to offer customers cross-domain solutions from a single source. It also applies its expertise in connectivity and artificial intelligence in order to develop and manufacture user-friendly, sustainable products. With technology that is "Invented for life," Bosch wants to help improve quality of life and conserve natural resources. The Bosch Group comprises Robert Bosch GmbH and its roughly 490 subsidiary and regional companies in over 60 countries. Including sales and service partners, Bosch's global manufacturing, engineering, and sales network covers nearly every country in the world. Bosch's innovative strength is key to the company's further development. At 136 locations across the globe, Bosch employs some 87,000 associates in research and development.
