

## Mobility Aftermarket

### **Bosch expands its air conditioning portfolio with new pressure sensors**

March 2026  
PI 12064 MA

Starting early 2026, workshops will receive the relevant components for the air conditioning system from a single source

- ▶ Comprehensive range: 60 part numbers covering a majority of the European vehicle fleet
- ▶ Proven quality and reliability: Intensive pressure and leak tests before being included in the product range
- ▶ Easy and secure installation: Precise fit and supplied with O-rings for straightforward mounting

**Karlsruhe, Germany** – To provide workshops with even more comprehensive support in air conditioning services, Bosch is expanding its aftermarket range of A/C components to include an important part: the pressure sensor for the air conditioning circuit. With the Europe-wide launch of 60 part numbers starting in the first quarter of 2026, Bosch is expanding its portfolio in the air conditioning segment. This will enable workshops to source all the necessary parts for the repair and maintenance of air conditioning systems from a single source.

#### **Competence that makes everyday workshop life easier**

Pressure sensors are essential components for controlling and protecting air conditioning systems. They precisely measure and regulate the refrigerant pressure in the high- and low-pressure lines. Proper operation not only ensures optimal cooling performance but, above all, protects expensive components such as the compressor from damage caused by incorrect pressure conditions. With the addition of pressure sensors to its portfolio, Bosch now offers workshops and wholesalers a complete range from a reliable partner. Bosch's global distribution network ensures the availability of

the new pressure sensors, which workshops can order as usual through their established national sales channels.

### **High market coverage, variety, and quality**

The new wide range of Bosch pressure sensors is characterized by its proven quality. Sixty available part numbers cover a majority of the European vehicle fleet. To meet the diverse requirements of modern vehicles, the pressure sensors are available for vehicles with combustion engine as well as for electric and hybrid vehicles. They are available in various versions: mechanical or electronic, and with integrated temperature measurement. Before a pressure sensor is included in the Bosch product range, it undergoes rigorous pressure and leakage tests. This high quality standard ensures the component's durability and reliable operation after installation.

### **Designed for the workshop**

Bosch has consistently focused on workshop benefits when creating this product range. All pressure sensors are precisely designed and delivered ready for installation with the appropriate O-rings. This small but crucial advantage eliminates additional work steps, which can save valuable time during repairs, and ensures a permanently leak-proof connection in the refrigerant circuit.

*The Mobility Aftermarket division (MA) provides the aftermarket and repair shops worldwide with modern diagnostic and repair shop equipment and a wide range of spare parts – from new and exchange parts to repair solutions – for passenger cars and commercial vehicles. Its product portfolio includes products made as Bosch original equipment, products developed in-house and specifically manufactured for the aftermarket, as well as services. Around 16,000 associates, as well as a global logistics network, ensure that spare parts reach customers quickly and on time. MA supplies testing and repair-shop technology, diagnostic software, service training, and information services. In addition, the division is responsible for the “Bosch Service” repair-shop franchise, one of the world’s largest independent chains of repair-shops, with some 13,000 workshops, and more than 700 “AutoCrew” partners in over 100 countries. In addition, with Bosch Classic, MA supports owners of classic cars with a wide range of spare parts and services.*

*The Bosch Group is a leading global supplier of technology and services. It employs roughly 412,000 associates worldwide (as of December 31, 2025). According to preliminary figures, the company generated sales of 91 billion euros in 2025. Its operations are divided into four business sectors: Mobility, Industrial Technology, Consumer Goods, and Energy and Building Technology. With its business activities, the company aims to use technology to help shape universal trends such as automation, electrification, digitalization, connectivity, and an orientation to sustainability. In this context, Bosch's broad diversification across regions and industries strengthens its innovativeness and robustness. Bosch uses its proven expertise in sensor technology, software, and services to offer customers cross-domain solutions from a single source. It also applies its expertise in connectivity and artificial intelligence in order to develop and manufacture user-friendly, sustainable products. With technology that is "Invented for life," Bosch wants to help improve quality of life and conserve natural resources. The Bosch Group comprises Robert Bosch GmbH and its roughly 490 subsidiary and regional companies in over 60 countries. Including sales and service partners, Bosch's global manufacturing, engineering, and sales network covers nearly every country in the world. Bosch's innovative strength is key to the company's further development. At 136 locations across the globe, Bosch employs some 82,000 associates in research and development.*
