

Bosch GuardMe – the smartphone-based personal emergency signal system

There are around **8.5 million** lone worker jobs in Germany and around **30 million** in Europe

Around **875,000 work accidents** happen in Germany every year

The deadline for initiating primary response is **15 minutes**

The chances of survival in case of a cardiac arrest decrease by **7-10% per minute**

The Bosch GuardMe app turns an adapted Android smartphone into a personal emergency signal system. If a lone worker has an accident, the app triggers an alarm and automatically initiates a voice connection to a Bosch Monitoring Center. Our 24/7 availability ensures that the rescue chain can be initiated immediately.

- ▶ App is intuitive to use
- ▶ Certified as a personal emergency signal system according to DIN VDE V 0825-11
- ▶ Available for adapted Android smartphones
- ▶ Manual emergency call function and automatic alarm detection, e.g. falls, position, or immobility
- ▶ Localization in the event of an alarm – indoor & outdoor
- ▶ Alarm processing by the Bosch Monitoring Center under 24/7 operation
- ▶ Immediate initiation of the rescue chain

Benefits

For all

Highest security standards through BG certification and GS seal

For lone workers

High comfort – communication and lone worker protection combined in one device

Automatic alarm detection for help in critical situations and in remote locations

For employer

Supports employee health and safety in the workplace

Everything from a single source – innovative technology & professional service

For rescue teams

Targeted navigation to the accident site using the positioning function

Bundled information on the course of the accident through the upstream Bosch Monitoring Center
