

Bosch Packaging Technology

March 2013

Bosch Packaging Technology, based in Waiblingen near Stuttgart, is one of the leading suppliers in the field of process and packaging technology, employing around 5,000 associates. In more than 30 locations in over 15 countries, highly qualified specialists develop and produce holistic systems for the pharmaceutical, food and confectionery industries. A comprehensive service portfolio completes the package. In fiscal 2011, sales totaled 914 million euros.

The company's range of products and services includes filling, process and packaging technology for the pharmaceutical and confectionery sectors as well as packaging solutions for piece and bulk goods in the food industry and for health and personal care products. There are a number of reference projects involving producers of bars, biscuits and chewing gum. The Pharma business unit is a world leader in sterile filling and packaging processes and isolator technology. The range of services includes single modules as well as complete systems and customized all-in-one solutions, all based on a holistic consulting process and project engineering know-how.

Packaging Technology is a division of Robert Bosch GmbH and was established in 1974. It has grown consistently through organic growth and acquisitions. Today, entirely under the Bosch umbrella, the division offers one-stop solutions for all line components required in filling and packaging processes.

Bosch Packaging Technology's European production facilities are located in Germany, Denmark, Austria, France, Great Britain, the Netherlands, Switzerland and Slovakia. Globally, Bosch Packaging Technology maintains production facilities in Brazil, China, the USA, Japan, Russia, Singapore, South Africa, Thailand and India. There are also a number of sales locations in other countries.
